

# Sentinel Cloud Run-time .NET Samples ReadMe

## Introduction

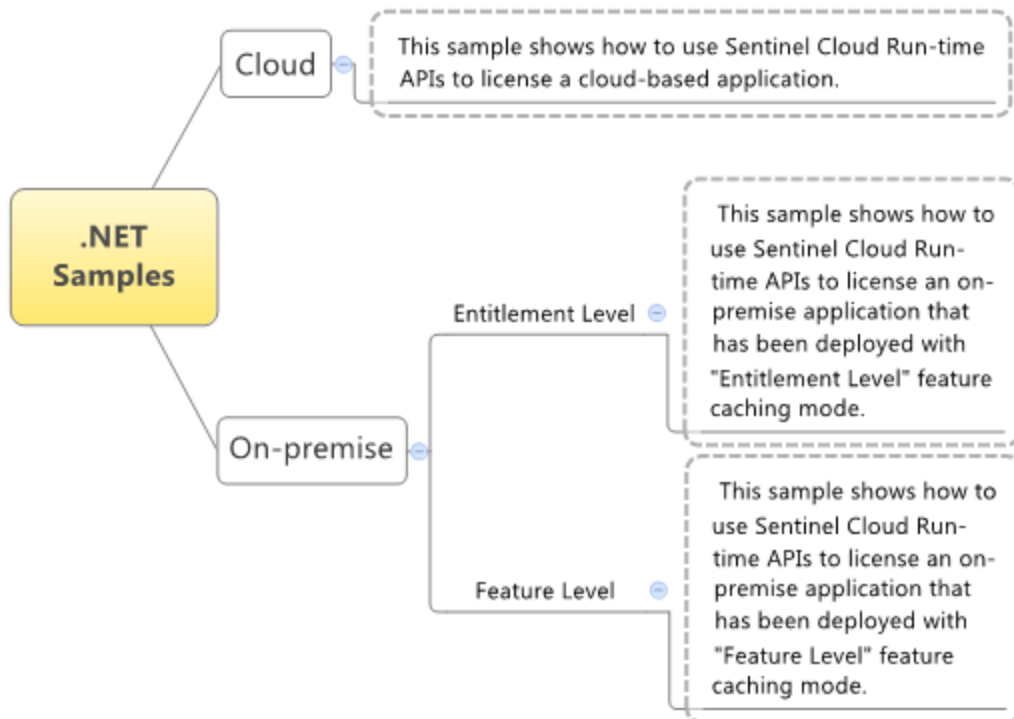

This document provides details of Run-time .NET samples offered by Sentinel® Cloud.

The .NET samples covers the following stages of licensing:

Licensing	Usage
License Availability	Checks if a license can be granted to a user or not.
Requesting a License	Authorizes a user by requesting a license from the Cloud Connect.
Releasing a License	Releases the license acquired by the user.

## Available Run-time .NET Samples

A set of console-based samples written in .NET programming language are available that demonstrate how to implement Sentinel Cloud Run-time API calls in an application. You can use the sample that best suits your deployment environment.

## Prerequisites

This section lists the requirements for using Run-time .NET samples.

### Run-time SDK

Before you run the samples, you must have installed Run-time SDK. The following table lists the installed folders that contain items for using .NET Run-time samples.

Directory	Contents
<b>Configurations</b>	Stores the client configuration file, <i>SentinelCloudRuntime.properties</i> , which contains configuration settings for executing Run-time APIs.
<b>RunTimes/Dot NET SDK</b>	Contains the required libraries.
<b>Samples/Runtime/DotNet</b>	Contains source code and workspace of .NET samples. Separate sample folders are available for <b>Cloud</b> and <b>On-Premise</b> deployments, each of which contains the project solution file and main files containing API source.
<b>Redistributables</b>	Contains <i>haspdinst.exe</i> which need to be installed for on-premise deployments.
<b>Samples/Utilities/DotNet</b>	Contains .NET utilities for fingerprint extraction and management. You will need these for on-premise deployments.  The <b>Utilities</b> folder is not available on Linux.

For more information on installation, see *Installation Guide*.

### Operating System and Compiler

- Windows (32-bit and 64-bit)
- Microsoft Visual Studio

These samples have been created in Microsoft Visual Studio 2005.

### Entitlement Availability

Before you run a sample, an entitlement for its deployment type should be created in EMS.

- Before running the **Cloud** sample, ensure that a Cloud entitlement has been created in EMS.
- Before running the **Entitlement Level** sample, ensure that an On-premise entitlement with feature caching mode as Entitlement level has been created in EMS.
- Before running the **Feature Level** sample, ensure that an On-premise entitlement with feature caching mode as Feature level has been created in EMS.

See *Quick Start Guide* for a quick overview on how to create entitlements in EMS.

## Machine Registration for Running Entitlement Level and Feature Level Samples

For running the Entitlement Level sample, you must have registered machine fingerprint with the entitlement. For Feature Level sample, this step is optional.

You can use the utility available in the SDK installation folder for machine registration. See *Sentinel Cloud Fingerprint Management Utilities ReadMe* for more information.

### Configuration Related Items

You will need the following items while configuring samples. These items are provided to you in e-mails from SafeNet:

- **YPSAddress:** Address of the Cloud Directory Services.
- **ClientAlias:** This is usually the vendor name provided in the vendor registration request file.
- **Vendor ID:** The unique ID assigned to each customer of Sentinel Cloud.
- **Secret Key ID:** ID of the secret key.
- **Secret Key:** The secret key received from SafeNet for authentication of the client requests.

In addition to the above, for running on-premise samples, you will also need **CA certificate bundle** that refers to the certificate store that Run-time uses for server certificate verification. You can download it from <http://curl.haxx.se/ca/cacert.pem>.

## Configuring .NET Samples

Open the client configuration file and update the following properties:

Property	Example
YPSAddress	<code>&lt;add key="YPSAddress" value="https://yps-trial.sentinelcloud.com/YPSTest" /&gt;</code>
DeploymentType	If you are running cloud sample, set its value to <b>Cloud</b> . <code>&lt;add key="DeploymentType" value="Cloud" /&gt;</code> If you are running Entitlement Level or Feature Level sample, set its value to <b>OnPremise</b> . <code>&lt;add key="DeploymentType" value="OnPremise" /&gt;</code>
ClientAlias	<code>&lt;add key="ClientAlias" value="isv" /&gt;</code>
VendorID	<code>&lt;add key="VendorId" value="a8e06c3" /&gt;</code>
SecretKeyId	<code>&lt;add key="SecretKeyId" value="SecretKeyId" /&gt;</code>
SecretKey	<code>&lt;add key="SecretKey" value="SecretKey" /&gt;</code>
CABundle	<code>&lt;add key="CABundle" value=".\\cacert.pem" /&gt;</code>

## Running .NET Samples

---

The steps for running .NET samples are:

1. Open *APIDemo.sln* in Microsoft Visual Studio.
2. In the *APIDemo.cs* file, update customer, user, feature details according to the values specified in EMS. Also provide your remarks in the vendorInfo string, for example, *Vendor Application Data*.
3. Build *APIDemo.sln* and run it.

## API Implementation in .NET Source Code

You can analyze the source code of samples to understand calling sequence and implementation of Run-time APIs. This section lists the order in which Run-time APIs have been implemented in samples.

Cloud	On Premise Entitlement Level Caching	On Premise Feature Level Caching
<ul style="list-style-type: none"> <li>■ acquireLicenseClient</li> <li>■ getInfo - with format set as Feature_Details</li> <li>■ login - with details of feature, customer, and user</li> <li>■ logout</li> <li>■ releaseLicenseClient</li> </ul>	<ul style="list-style-type: none"> <li>■ acquireLicenseClient</li> <li>■ transfer - with Detach action</li> <li>■ getInfo - with format set as Feature_Details</li> <li>■ login - with details of feature, customer, and user</li> <li>■ logout</li> <li>■ releaseLicenseClient</li> </ul>	<ul style="list-style-type: none"> <li>■ acquireLicenseClient</li> <li>■ getInfo - with format set as Feature_Details</li> <li>■ transfer - with Detach action</li> <li>■ login with details of feature, customer, and user</li> <li>■ logout</li> <li>■ releaseLicenseClient</li> </ul>

For details about the Run-time APIs, refer to the *Sentinel Cloud Run-time Guide*.

## Obtaining Support

If you encounter a problem while installing, registering or operating this product, please make sure that you have read the documentation. If you cannot resolve the issue, contact your supplier or SafeNet Customer Support. SafeNet Customer Support operates 24 hours a day, 7 days a week. Your level of access to this service is governed by the support plan arrangements made between SafeNet and your organization. Please consult this support plan for further information about your entitlements, including the hours when telephone support is available to you.

Contact Method	Contact Information	
Address	SafeNet, Inc. 4690 Millennium Drive Belcamp, Maryland 21017, USA	
Phone	US	1-800-545-6608
